

Is the management of your financial data costing you time and money?

Finance Manager enables you to centrally receive sales, stock, debtor, invoicing and cashier data and provides a mechanism where it can be exported into an accounting package. By enabling you to automatically enter data into your financial systems you will save time and money otherwise spent on keying data manually.

Business Benefits:

- Finance Manager is truly integrated into most major accounting software to enable you to process your financial data directly through to your accounting package
- Enter and track your cashier or terminal pickups by tracking cashier variances and entries to balance the banking
- Export department sales and enables you to post sales to your accounting package
- Process your invoices and dissect them to the department level, with no need for re-entry, thereby eliminating errors
- Manage debtors with your accounting package
- Enter and track your cash movements to ensure that all monies are properly accounted for and reconciled
- Suitable for single and multi-stores
- Helps you eliminate double entry and create more visibility over your cash-flow
